

Native Plants for Native Wildlife

There are many benefits for promoting wildlife and perhaps no better way than to provide the native plants that they depend on for food and shelter. It is truly amazing how quickly local bird and animals populations can rebound when suitable food and shelter are provide.

The WACD Plant Materials Center grows over 60 species of trees and shrubs that are native to this regions. The plants listed here provide many of those things that are necessary for a healthy, diverse and functioning plant and animal community.

The PMC will customize wildlife packages, or these plants may be purchased individually. For pricing, availability and customized packages, please contact your local conservation district.
